

# NEW METALS TECHNOLOGY I CREATIVE SILVER MODELLING

## PROJECT THREE SYRINGED PENDANT

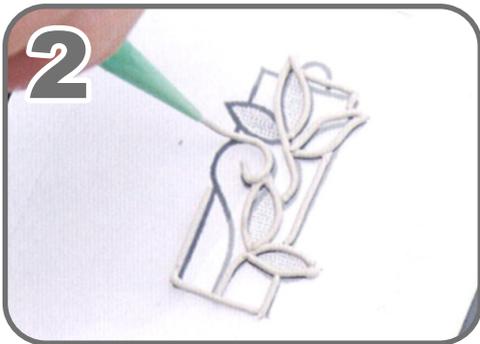

Trace your desired pattern on the back of the baking paper. Ensure you draw stone sizes accurately & in actual size.

---

---

Turn over the baking paper & draw your syringe lines on the front side. Lift the tip 2-3mm from the surface and maintain even pressure and speed during the drawing process.

---

---

Draw again over the first layer to make the framework thicker.

---

---

---

Use a dampened paint brush to adjust the lines. Dry the piece.

---

---

Remove from baking paper and turn around the piece. For the third layer, draw stone bezels on the front side, and then place stones into the openings before the bezel lines dry.

---

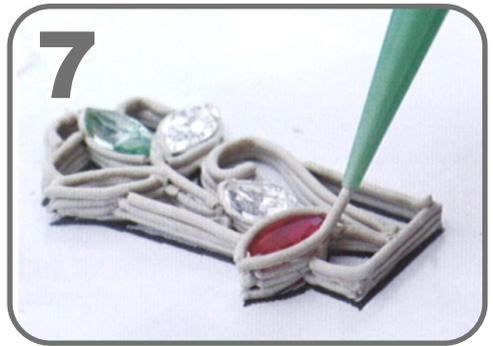

---

Finish drawing the rest of the third layer. Use a dampened paint brush to adjust the lines.

---

---

For the fourth layer, draw over the stone girdles to close the bezel lines.

---

---

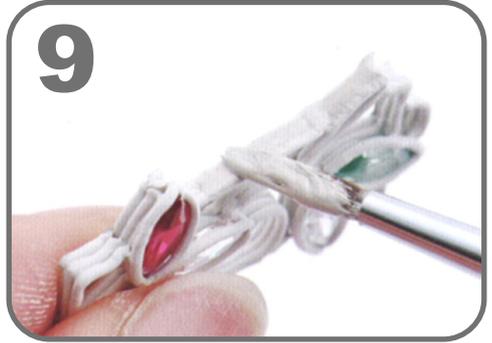

8

Dry for at least 10 minutes. When dry, remove the piece from the baking paper.

---

---

9

Fill any areas (openings between the layers) with Paste type. Dry.

---

---

10

File and sand to smooth the surface (pre-finishing).

---

---

11

Remove all dust made from pre-finishing the stones.

---

---

Fire the piece at 800°C for 5 minutes.

---

---

Finish with a stainless steel brush.

---

---

Shine the surface with a burnisher.

---

---

Attach a jump ring to complete.

---
